- ElasticSearch
- Redis
- Kafka
- SQL
- Git
- Bash

ABOUT ME

I am a software developer with professional experience in designing, implementing, and maintaining web solutions using primarily technologies such as Java, React, and NodeJS.

EXPERIENCE

Ensolvers (Software Factory)
ensolvers.com — 2021 - 2023

I was part of the integration team in the company's most important project. I led the development of strategic integrations with renowned platforms such as Shopify, Stripe, and Twitter, establishing myself as a key member of the team.

During these implementations, it was necessary to maximize performance and deal with the inherent limitations of these platforms, requiring the application of caching, batching, and rate-limiting techniques to achieve sustainable scalability over time.

I actively participated in the interview processes with the aim of adding new talent to the team. Additionally, I provided training and initial support to new team members, actively mentoring them during their first months on the project.

PERSONAL PROJECTS

Queuety
queuety.vercel.app — 2023

Particularly, I would like to highlight my most recent project, which is a web application that allows managing the playback of YouTube videos on a computer through one or multiple mobile devices, without the need to be connected to the same Wi-Fi network.

Through this project, I aimed to improve my skills in developing intuitive interfaces, emphasizing on providing a good user experience.

Stack: React, NestJS, WebSockets.

EDUCATION

Computer Science (Licenciatura en informatica) — 2016 - present
Universidad Nacional de La Plata
(80% completion)
